By Donald R. Sherbert, Robert G. Bartle

Wiley India Pvt. Ltd, 2014. Softcover. Book Condition: New. 4th edition. 18 x 24 cm. This text provides the fundamental concepts and techniques of real analysis for students in all of these areas. It helps one develop the ability to think deductively, analyse mathematical situations and extend ideas to a new context. Like the first three editions, this edition maintains the same spirit and user-friendly approach with addition examples and expansion on Logical Operations and Set Theory. There is also content revision in the following areas: introducing point-set topology before discussing continuity, including a more thorough discussion of limsup and liminf, covering series directly following sequences, adding coverage of Lebesgue Integral and the construction of the reals and drawing student attention to possible applications wherever possible. Chapter 1 Preliminaries. 1.1 Sets and Functions. 1.2 Mathematical Induction. 1.3 Finite and Infinite Sets. Chapter 2 The Real Numbers. 2.1 The Algebraic and Order Properties of  $\mathbb{R}$ . 2.2 Absolute Value and the Real Line. 2.3 The Completeness Property of  $\mathbb{R}$ . 2.4 Applications of the Supremum Property. 2.5 Intervals.
